

MASTER CLASS

In a world of ever-decreasing resources it's not enough just to design a beautiful home, you need to build one that will look as good in 20 years as it did on the day it was finished. One professional leading the way to enduring design is the first builder to have earned the Master Builder designation from the Energy & Environmental Building Association (EEBA).

JIM SARGENT
GMB, CGB

Jim Sargent of Waxahachie, Texas has built a reputation for creating environmentally sustainable houses. Sargent began his custom home building business in the 1970's during the oil embargo and ensuing energy crisis. From the beginning, he has monitored the energy consumption of every home he has built.

- His understanding of how to build a healthy, high performance home has made him a popular guest on Dallas radio and television shows.
- He teaches Energy Efficient Construction for the National Association of Home Builders' University of Housing.

- NAHB has recognized Jim as a Graduate Master Builder, GMB; a Certified Graduate Builder, CGB; and a Certified Aging in Place Specialist.
- Sargent has used James Hardie® siding products on homes for more than 15 years, including the home submitted as his Master Work for EEBA's Master Builder designation.
